BOOK · PAY ADVANCE · SKIP THE QUEUE

Shop guide for staff & counter — services, online advance rules, booking flow, and the owner admin panel.

What customers see

Customers book from the mobile app: pick a **barber** → service + wash → date & 15-minute slot → pay **50% advance online** (Razorpay) → booking is **confirmed**. They show up, use the service, and pay the balance at the counter.

Service plan (online prices)

Service	Duration	Online price	Advance online	Notes
Haircut	60 min	₹100	50% (₹50)	Wash add-on +₹30 / +15 min
Shaving	30 min	₹70	50% (₹35)	Wash allowed
Beard trim	15 min	₹50	50% (₹25)	Wash allowed
Massage + Haircut	90 min	₹200	50% (₹100)	Head massage + haircut
Shaving + Massage	60 min	₹130	50% (₹65)	Shave + head massage
Haircut + Shaving	90 min	₹180	50% (₹90)	Combo
Haircut + Beard trim	75 min	₹130	50% (₹65)	Combo
Full combo	120 min	₹250	50% (₹125)	Haircut + beard + massage + wash
Hair color	90 min	₹100 advance	₹100 flat	Actual price decided at shop on completion
Wash add-on	+15 min	+₹30	—	Allowed on any service

Advance rule: fixed services → online advance = 50% of total (rounded up). Hair color → fixed ₹100 online; admin sets the final price at the shop and balance is collected there. Cancel ≥ 2 hours before the slot → automatic refund of the advance; later cancel → advance is forfeited.

Counter flow (staff)

1. Customer arrives → check **My bookings** on their phone, or open the **Admin panel → Bookings**.
2. Unpaid slots disappear after **12 minutes** automatically (hold expiry).
3. After service: Admin panel → booking → **Complete** (hair color: enter final ₹ at center). Balance = final – online paid.
4. No-show → mark **No show** in the panel.
5. Refunds (cancel ≥ 2h) are processed from the payment side; status becomes **Refunded**.

Owner admin panel

Pages (browser):

- **Login** — own page (no dashboard until signed in)
- **Dashboard** — daily bookings & revenue

Local addresses:

- Panel home: `http://localhost:8000/panel`

- **Barbers** — name, photo, bio, weekly hours
- **Services** — edit the salon plan (₹ / duration)
- **Bookings** — filters, complete / no-show
- Login: <http://localhost:8000/panel/login>
- Dashboard: <http://localhost:8000/panel/dashboard>
- API health: <http://localhost:8000/health>

Same admin email/password as the seed in .env.

Running the system (Docker)

The whole stack is Docker Compose: **Postgres** + **API** (migrations → seed → server → admin panel static files). Rebuild once after code changes; otherwise a restart is enough:

```
# first time / after code changes
docker compose up -d --build

# day-to-day (after machine reboot, etc.)
docker compose restart
# or
docker compose up -d

# status
docker compose ps
curl -f http://localhost:8000/health
```

Data persists in volume `salon_pgdata`. Env secrets live in root `.env` (never commit). For public HTTPS (Razorpay webhooks) use Caddy or a Cloudflare tunnel in front of port 8000 — see `deploy/NOTES.md`.

Cloudflare Tunnel (quick link set)

With the stack running, expose port 8000 (quick try):

```
cloudflared tunnel --url http://localhost:8000
```

Then open the printed `https://...trycloudflare.com` URL and append:

What	Path
Admin login page	/panel/login
Dashboard (after login)	/panel/dashboard
Barbers / plan	/panel/barbers · /panel/services
API health	/health
API docs	/docs

For a **stable** hostname, create a named Cloudflare tunnel and DNS route (e.g. `admin.example.com` → `http://localhost:8000`) instead of the ephemeral `trycloudflare` URL. Keep `.env` secrets private; use mock payments (`RAZORPAY MOCK=1`) only for demos.
